Subject: Dimock EPA-generated Data Status (as of 2/28/12) for Week #1 Roll-out

Hi Everyone -

As you know - we have been given some deadlines and a schedule for providing data to residents and also generally releasing it to the "public."

Based on those deadlines - I have used our data process chart to develop a schedule for finalizing and releasing the data for the first week of sampling.

The proposed TATs for all levels of review are Extremely tight. And I recognize that the Fort Meade EPA and ESAT folks and SERAS are currently doing the best you can to expedite the review of this data.

That being said please look at the attached table. First - please let me know if I have missed anything significant and / or whether you have questions. Secondly, I need to know whether you can meet the proposed deadlines. Again - this is only for the review/release of week #1 data. We are expected to continue to roll out the data week by week as follows:

Week #1 - final data to residents no later than 3/9.

Week #2 - final data to residents no later than 3/16.

Week #3 - final data to residents no later than 3/23.

Week #4 - final data to residents no later than 3/30.

As discussed, for today I am mainly concerned with meeting the deadlines for week #1 of data.

Please take a look at the attached table. I also included a table which lists the locations sampled each week.

I think that we may want to have a conf call to discuss this.

THANKS !!!
